Esercitio

Calcolone la trosformata di Fourier del sequente sequele

$$n(t) = \begin{cases} 2 & |t| \le 0.5 \\ 1 & \text{ois } \le |t| \le 1 \\ 0 & \text{otherwork} \end{cases}$$

Data la propriété di lucerité si puo colcolore la tett di xtt) couve la souropposizione della trosformate dei segunute sequoli

$$G(x) = \frac{1}{2} \sin((\frac{\pi}{2}f)e) + 2 \sin(\pi f)$$

$$+ \frac{1}{2} \sin((\frac{\pi}{2}f)e) + 2 \sin(\pi f)$$

$$+ \frac{1}{2} \sin((\frac{\pi}{2}f)e)$$

$$= \frac{1}{2} \operatorname{sinc}\left(\frac{\pi}{2}f\right) \left[e^{\frac{3}{2}\pi f} - i\frac{3}{2}\pi f \right] + 2 \operatorname{sinc}\left(\pi f\right)$$

= Sinc
$$\left(\frac{\pi}{2}f\right)\cos\left(\frac{3}{2}\pi f\right) + 2\sin\left(\pi f\right)$$

Il primo termine può niscuversi come seque

Sinc
$$\left(\frac{\pi}{2}f\right)\cos\left(\frac{3}{2}\pi f\right) = \frac{1}{\frac{\pi}{2}f}\left[\sin\left(\frac{\pi}{2}f\right)\cos\left(\frac{3}{2}\pi f\right)\right]$$

Per la formula di Werner

$$Sind cos \beta = \frac{1}{2} \left[Sin(\lambda + \beta) + Sin(\lambda - \beta) \right]$$

Possiamo riscurere

Sinc
$$\left(\frac{\pi}{2}f\right)\cos\left(\frac{3}{2}\pi f\right) = \frac{1}{\frac{\pi}{2}f}\left[\sin\left(\frac{\pi}{2}f\right)\cos\left(\frac{3}{2}\pi f\right)\right] =$$

$$= \frac{1}{\frac{\pi}{2}f} \cdot \frac{1}{2} \left[\sin(2\pi f) - \sin(\pi f) \right]$$

$$= \frac{1}{2} \cdot \frac{1}{\frac{\pi}{2}f} \sin(2\pi f) - \frac{1}{\frac{\pi}{2}f} \cdot \frac{1}{2} \sin(\pi f)$$

$$\Rightarrow$$
 Sinc $(\sqrt[\pi]{f})\cos(\frac{3}{2}\pi f) = 2\sin(2\pi f) - \sin(\pi f)$

Possiamo quindi riscrivere la trosformata di Fourier di XH) come 3

Luest'ultimo moultots può otteners auche considerants il sequele XH) come la seguente sourappssizione
